

- Overriding works for inheritance relationship
- When child class change his parent properties , that is overriding

```
class Father {  
  first_name='Jhon'  
  last_name='Dee'  
  getName() {  
    return (`The name of the person is ${this.first_name} ${this.last_name}`)  
  }  
}  
  
class Son extends Father{  
  first_name='Jhon Junior'  
}  
  
const SonObj = new Son();  
console.log(SonObj.getName());
```
